

Beeline Sprinkler Repair

GBP Heat Map, Google Search Console, and Local Market Visibility Report

Data window: Google Search Console May 20 to Jun 16, 2026. LeadSnap grid snapshots Jun 15 to Jun 18, 2026. Grid size: 13 x 13, 169 points, Nampa centered Treasure Valley scan.

Business Profile	Value
Name	Beeline Sprinkler Repair
Address	5606 W Amity Rd, Nampa, ID 83687
Phone	+1 208-880-2712
Rating	4.9 stars, 144 reviews
Photos	46 photos
Primary category	Lawn sprinkler system contractor

Bottom line: Beeline owns Nampa, is already dangerous in Meridian, has service page wins in Boise, but still has a broad Boise repair weakness, a backflow weakness, and a seasonal blowout opportunity that needs to be built before fall. The current website expansion appears to be working because GSC impressions are up sharply and average position improved after the edits. The next move is not a rebuild, it is focused tightening.

1. Executive Summary

Metric	Result	Read
LeadSnap mean average rank	7.10	Strong overall local visibility across 25 tested terms
Aggregate Top 3 coverage	31.7%	1338 of 4,225 keyword grid points in the map pack
Aggregate Top 10 coverage	79.0%	3339 of 4,225 keyword grid points in top 10
Aggregate not found rate	11.6%	489 of 4,225 points outside top 20
Dominant keywords	8	Average rank at or under 5
GSC 28 day clicks	262	Traffic is real, not just map visibility
GSC 28 day impressions	10,900	Demand and indexing expanded
GBP review base	4.9 stars, 144 reviews	Strong enough to win local service calls if visibility improves

The cleanest way to interpret the GBP heat map is this: Beeline is not a small invisible profile. Across all 25 keywords, it appears in the top 10 on 79.0% of all tested keyword grid points and in the top 3 on 33.5%. That means the profile has meaningful market presence already. The problem is unevenness. Nampa is nearly owned. Meridian has strong presence but weaker top 3 pack penetration. Boise has pockets of excellent service keyword visibility but broad Boise repair terms are still not dependable enough. Backflow is the biggest outlier.

The GSC data supports the same story from the website side. After the city and service page buildout, impressions moved from roughly 277 per day to roughly 517 per day, an increase of about 86%. Average organic position improved from 18.3 to 11.8. Clicks per day dipped slightly and CTR fell, but that is expected when Google starts testing a larger new keyword set at positions that have not yet matured.

2. GBP Heat Map Visibility

This section turns the 13 x 13 grids into practical business metrics. I am using three measurements: Top 3 coverage, Top 10 coverage, and not found rate. Top 3 coverage is the closest thing to real map pack market share because those are the rankings most customers actually see without digging. Top 10 coverage matters because it shows where Google already considers Beeline relevant. Not found rate shows where the profile is outside the top 20 and needs either proximity, relevance, category, review, content, or citation work.

Reading this chart: Nampa keywords are elite. The top Boise service keywords are very good. Meridian is strong but not yet dominant. The weak end of the list is not random, it is installation, generic broad phrases, backflow, and Treasure Valley wide repair language.

3. Map Pack Penetration

Top 3 coverage is the highest value local metric in this report. A profile can have a decent average rank and still miss a lot of calls if it sits in positions 4 to 10 too often. This is exactly what is happening on several keywords. Beeline is visible, but not always in the money spots.

The most important weakness is not visibility in general, it is Top 3 conversion of visibility. Sprinkler valve repair Meridian ranks in the top 10 at 160 of 169 points, but top 3 at zero points. That means Google understands relevance, but Beeline is not being selected as one of the best three choices for that phrase yet. Backflow preventer repair is worse, with only 1 point in top 3 and 71 points in top 10.

4. Coverage Funnel

This chart shows every keyword as a funnel of 169 map points. The darker business reality is simple: green would be top 3 if we were coloring this manually. The first segment is where the calls are most likely to happen. The second segment, ranks 4 to 10, is the opportunity bench. The last two segments are places where the profile is either weak or not found.

The biggest repairable opportunity is not the keywords where Beeline is absent everywhere. It is the keywords where Beeline is already top 10 almost everywhere but not top 3 enough. Those are the fastest wins because Google already has Beeline in the candidate set.

5. Performance by Market Segment

Grouping the keywords makes the business picture clearer. Nampa repair is the fortress. Meridian repair is the second best core. Boise service keywords are better than broad Boise repair keywords. Generic repair and installation are broad, valuable, and naturally harder because the grid is centered around Nampa while the query intent is less specific.

Bucket	Keywords	Avg rank	Avg Top 3	Avg Top 10	Avg not found
Nampa Repair	2	2.50	80.5%	100.0%	0.0%
Meridian Repair	3	4.34	36.7%	99.6%	0.4%
Boise Service	5	4.89	38.8%	95.4%	3.3%
Meridian Service	2	6.03	10.7%	95.0%	5.0%
Seasonal	1	6.79	29.0%	81.1%	3.0%
Boise Repair	3	8.46	21.9%	70.8%	17.8%
Install	3	9.02	31.4%	64.3%	20.7%
Generic Repair	5	10.21	23.2%	56.3%	22.7%
Backflow	1	12.68	0.6%	42.0%	29.6%

6. Google Search Console, What the Site Is Doing

The site data and GBP data agree. The website expansion increased keyword surface area. The after window is shorter by two days, so daily rates matter more than raw totals. Impressions per day rose from roughly 277 to 517. Average position improved from 18.3 to 11.8. CTR dropped from 3.6% to 1.7%, which is normal when a site suddenly begins showing up for many more searches that are still outside the top few organic positions.

This is a healthy expansion pattern. The mistake would be to rewrite everything because CTR fell. The right move is to keep the new structure mostly stable, fix technical defects, improve titles on pages already getting impressions, and build more internal authority around the keywords where GBP is visible but not yet top 3.

7. Organic Query Picture

The visible GSC query list shows Beeline still gets a major branded click base, but the non brand terms are now real. Sprinkler repair Nampa, sprinkler repair Boise, sprinkler repair Meridian, sprinkler repair near me, and sprinkler repair Caldwell are already producing clicks. This matters because the GBP heat map says the same cities and phrases are where you have profile visibility.

Query	Type	Clicks	Impr	CTR
beeline sprinkler repair	Brand	87	259	33.6%
sprinkler repair nampa	Non brand	17	475	3.6%
sprinkler repair meridian	Non brand	8	264	3.0%
sprinkler repair boise	Non brand	7	350	2.0%
sprinkler repair	Non brand	7	155	4.5%
sprinkler repair near me	Non brand	6	473	1.3%
sprinkler repair caldwell	Non brand	5	78	6.4%
nampa sprinkler repair	Non brand	4	58	6.9%
sprinkler repair nampa idaho	Non brand	4	37	10.8%

8. Commercial Opportunity Ranking

This opportunity chart uses only keywords where volume and CPC were provided. The formula is volume times CPC times the Top 3 gap times average rank pressure. It is not a revenue forecast. It is a prioritization tool. High score means there is meaningful search demand, commercial value, and room to improve visibility.

9. What You Own Today

Nampa repair is the clearest owned market. Nampa sprinkler repair has an average rank of 2.40, 142 of 169 grid points in top 3, all 169 points in top 10, and zero not found points. Sprinkler repair Nampa is nearly as strong at 2.61 average rank with 130 top 3 points and zero not found points. This is not just visibility, it is dominance.

Meridian is a strong secondary market. Irrigation repair Meridian is excellent at 4.20 average rank and 100% top 10 coverage. Sprinkler repair Meridian and sprinkler system repair Meridian are both around average rank 4.4 with no meaningful not found problem. The issue is that Top 3 coverage sits around one third of the grid, not two thirds. Meridian is visible, but not yet owned.

Boise is split. Service modified Boise terms are performing well, especially sprinkler head repair Boise, sprinkler system repair Boise, sprinkler leak repair Boise, and sprinkler head replacement Boise. Broad Boise repair terms are much weaker. Sprinkler repair Boise and Boise sprinkler repair both sit around average rank 9.5 with more than 40 not found grid points. That means you do have Boise relevance, but the main Boise repair term still needs a stronger GBP and website push.

Broad generic phrases are not bad, but they are not owned. Sprinkler repair near me, sprinkler repair, sprinkler system repair, irrigation repair, and sprinkler installation carry big volume, but they are broader and more proximity sensitive. The play is not to chase the whole valley equally. The play is to strengthen city plus service relevance first, then let the broad terms rise as a byproduct.

10. Main Problems Holding Back Market Share

Problem 1: Broad Boise repair terms are weaker than Boise service terms. You rank much better for specific Boise services than for the main Boise repair phrase. That usually means Google sees page relevance for the service modifiers but is not fully convinced the profile itself is one of the top Boise repair entities across the whole grid.

Problem 2: Valve repair Meridian has relevance without pack power. It has 160 of 169 points in the top 10, but zero in the top 3. This is a classic near win. A focused Meridian valve repair page, more internal links, and GBP posts or photos about valve work could move this faster than most other terms.

Problem 3: Backflow preventer repair is a major miss. It has high CPC, good service value, and weak rankings. If backflow is a service you actually want, it deserves a dedicated page, clearer GBP service listing, photos, reviews mentioning backflow, and internal links from sprinkler repair, installation, and troubleshooting pages.

Problem 4: Installation has value but inconsistent coverage. Sprinkler system install has major volume and decent top 3 penetration near the core, but it has 21 not found points and average rank 7.40. Sprinkler installation is weaker at 10.54 average rank. Your install page likely needs a more modern page structure, better job photos, stronger city relevance, and more builder oriented proof.

Problem 5: GSC CTR is diluted. CTR is low right now because impressions expanded. That does not mean the site failed. It means you need title and meta improvements on pages already getting impressions, plus review and trust elements that make the result more clickable.

11. Priority Action Plan

Priority 1, fix the GBP service and category relevance. Keep the primary category as Lawn sprinkler system contractor unless testing shows another category is better in your market. Add or verify services for sprinkler repair, irrigation repair, sprinkler valve repair, sprinkler head repair, sprinkler system repair, sprinkler installation, sprinkler blowouts, backflow preventer repair, and drip irrigation. Use the same service language on the site and GBP.

Priority 2, publish GBP proof tied to the weak keywords. Add job photos and posts for Boise repair, Meridian valve repair, backflow repair, blowouts, and installation. The photos do not need to be fancy. Valve box, cracked pipe, controller, manifold, backflow, trench, new install, and before sod install photos are perfect because they prove the service.

Priority 3, build or improve the money pages. The top pages to build or strengthen are Boise sprinkler repair, Boise sprinkler valve repair, Boise sprinkler leak repair, Boise sprinkler head replacement, Meridian sprinkler valve repair, Nampa sprinkler leak repair, backflow preventer repair, sprinkler blowouts, and sprinkler installation. Do not make thin copies. Use real city details, real photos, price ranges, common causes, and internal links.

Priority 4, tighten website titles. Use direct titles that match the keyword. Example: Sprinkler Repair Boise, Free Quote. Example: Sprinkler Valve Repair Meridian, Free Quote. Avoid splitting the main H1 too much. The H1 should usually be the main money keyword and the subhead can carry the extra services.

Priority 5, let the new pages bake. The latest update only went live 3 to 4 days ago. Do not keep rewriting the whole site. Fix technical issues, add missing proof, improve internal links, then wait 2 to 4 weeks before judging the full effect.

12. Keyword Priority Table

This table ranks the most important terms by business action, not just by current rank.

Priority	Keyword or cluster	Why it matters	Recommended move
1	sprinkler repair boise, boise sprinkler repair	Big city, weak broad map position, many not focused on this	Strengthen Boise page, GBP photos, Boise service area proof, internal links
2	sprinkler valve repair meridian	Already top 10 almost everywhere, zero top 3	Create or strengthen Meridian valve repair page and GBP proof
3	backflow preventer repair	High CPC, weak current rank, service has strong history	Develop dedicated page, service listing, reviews mentioning backflow
4	sprinkler blowouts	High seasonal volume, needs ranking before fall	Build blowout page now, collect early internal links
5	sprinkler system install, sprinkler installation	High volume, install jobs can be large	Modernize install page with photos, design process, city proof
6	sprinkler repair near me, sprinkler repair near	High volume, but proximity sensitive	Win city pages first, let generic rise naturally
7	Nampa repair cluster	Already dominant	Protect with reviews, photos, and fresh proof

13. 30 Day Execution Plan

Days 1 to 3: Clean data and technical issues. Verify old city URL redirects, canonical tags, sitemap URLs, GBP services, and schema errors. Update only defects, not every page. Pull the exact Search Console pages with structured data issues before making broad schema changes.

Days 4 to 10: Improve Boise repair and Meridian valve repair. Add internal links from the homepage, Boise page, Meridian page, valve repair page, troubleshooting pages, and footer service list. Add job photos. Add one section per page with real local problems homeowners face.

Days 11 to 17: Build backflow and blowout pages. Backflow has high commercial value and low current visibility. Blowouts are seasonal and need time to rank before demand spikes. Use plain language, price ranges, service area, common problems, and photo proof.

Days 18 to 24: Modernize installation content. Add new install process, builder coordination, trenching before sod, controller setup, drip zones, backflow, pressure testing, and city level examples. Installation has enough volume to justify a stronger asset.

Days 25 to 30: Review GSC and LeadSnap again. Do not judge by CTR alone. Judge by impressions, average position, Top 3 points, Top 10 points, and not found points on the priority terms. The goal is to turn top 10 coverage into top 3 coverage.

14. Clean Scoreboard Data

Raw heat map grids are useful for spotting geographic pockets, but the business decision layer is the scoreboard below. It shows where the profile is dominant, where it is visible but not top 3 enough, and where it is still weak.

Keyword	Avg	Top 3	Top 10	NF	Vol	CPC	Bucket
nampa sprinkler repair	2.40	84.0%	100.0%	0.0%	210	\$9.15	Nampa Repair
sprinkler repair nampa	2.61	76.9%	100.0%	0.0%	210	\$9.15	Nampa Repair
sprinkler head repair boise	3.51	62.7%	97.0%	3.0%			Boise Service
sprinkler system repair boise	4.09	46.1%	97.6%	2.4%	10	\$26.76	Boise Service
irrigation repair meridian	4.20	43.8%	100.0%	0.0%	10	\$18.39	Meridian Repair
sprinkler repair meridian	4.41	33.1%	100.0%	0.0%	110	\$10.78	Meridian Repair
sprinkler system repair meridian	4.42	33.1%	98.8%	1.2%			Meridian Repair
sprinkler leak repair boise	4.78	38.5%	97.0%	3.0%			Boise Service
sprinkler leak repair meridian	5.02	21.3%	95.3%	4.7%			Meridian Service
sprinkler head replacement boise	5.70	31.4%	94.7%	2.4%			Boise Service
sprinkler valve repair boise	6.36	15.4%	90.5%	5.9%			Boise Service
irrigation repair boise	6.37	21.3%	86.4%	1.2%	590	\$19.02	Boise Repair
sprinkler blowouts	6.79	29.0%	81.1%	3.0%	4400	\$10.50	Seasonal
sprinkler valve repair meridian	7.03	0.0%	94.7%	5.3%			Meridian Service
sprinkler system install	7.40	34.3%	75.7%	12.4%	14800	\$8.74	Install
new sprinkler system treasure valley	9.12	36.7%	61.5%	19.5%			Install
sprinkler system repair	9.20	31.4%	60.9%	19.5%	2200	\$12.80	Generic Repair
sprinkler repair boise	9.48	24.9%	63.3%	26.6%	480	\$7.63	Boise Repair
boise sprinkler repair	9.54	19.5%	62.7%	25.4%	480	\$7.63	Boise Repair
sprinkler repair	9.69	29.6%	58.6%	20.7%	18100	\$9.45	Generic Repair
sprinkler repair near me	9.87	29.6%	58.6%	23.1%	40500	\$10.80	Generic Repair
sprinkler installation	10.54	23.1%	55.6%	30.2%	2900	\$6.27	Install
treasure valley sprinkler repair	10.71	5.9%	55.6%	15.4%			Generic Repair
irrigation repair	11.60	19.5%	47.9%	34.9%	4400	\$9.63	Generic Repair
backflow preventer repair	12.68	0.6%	42.0%	29.6%	2900	\$22.52	Backflow

Note: LeadSnap market share is reported by the tool, but in this report I treat Top 3 coverage as the more actionable map pack market share. It better matches what a homeowner sees in a local result.
